

DEARMAN TERMINAL GRAPHICS BUILDER™ MONITOR PRODUCT MOVEMENT IN REAL TIME

The Dearman Terminal Graphics Builder™ software allows you to take complete control of your terminal's process management functions and improves the efficiency and quality of your operations. Utilizing drag and drop technology, the Dearman Terminal Graphics Builder™ software creates a graphical representation of the distributed process lines employed within your facility and integrates the PLCs, process controllers, pumps, and motor operated valves of those process lines into a fully interactive system. With control over the individual subsystems, the overall process can then be managed centrally and represented graphically as a complete system.
